PROFILE SUMMARY

Aspiring AWS & DevOps Engineer with hands-on experience in AWS cloud projects involving secure infrastructure deployment, scalable web applications, serverless computing, and infrastructure monitoring. Familiar with AWS services such as EC2, VPC, S3, IAM, Lambda, RDS, CloudWatch, and Auto Scaling. Knowledge of Linux, Git, GitHub, CI/CD concepts, Docker, and DevOps practices. Eager to apply cloud computing and automation skills to build secure, scalable, reliable, and efficient infrastructure while continuously learning emerging technologies.

EDUCATION

Kongu Art's and Science College (Autonomous), Erode **2023 - 2026**

Bachelor of Science, Informaation Technology

SKILLS

- **Cloud (AWS) :** EC2, S3, IAM, RDS, ELB, Auto Scaling, CloudWatch, CloudTrail, SNS, ECS, EKS
- **Networking:** VPC, Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups
- **Containers:** Docker, Amazon ECS, Kubernetes
- **CI/CD:** Jenkins, GitHub Actions, Git, GitHub
- **Infrastructure as Code (IaC):** Terraform, Ansible
- **Linux Administration :** User Management, File Management, File Premissions, FIle Structure

WORK EXPERIENCE

QSpiders - AWS & DevOps - Coures **2026 - Present**

- Gained hands-on experience with AWS cloud services, including EC2, S3, IAM, VPC, RDS, Lambda, and CloudWatch.
- Learned to configure AWS networking components such as VPC, public and private subnets, route tables, Internet Gateway, and Security Groups.
- Practiced Linux commands, file management, and system administration.
- Gained practical knowledge of DevOps tools and technologies, including Git, GitHub, Jenkins, Docker, and Kubernetes.
- Learned CI/CD pipeline concepts and infrastructure automation using Terraform and Ansible.
- Worked on hands-on cloud infrastructure and deployment exercises following AWS and DevOps best practices.

Zentrixa technologies - Intern **2026**

Completed an internship in Web Development, gaining practical exposure to website design and development. Learned and practiced web development fundamentals, including creating and styling web pages. Gained experience in developing responsive and user-friendly web interfaces.

CERTIFICATION & AWARDS

- AWS Cloud Practitioner Essentials - AWS Training & Certification
- AWS Networking Basics - AWS Training & Certification
- Git & GitHub Bootcamp - LetsUpgrade
- Web Development - Zentrixa technologies - Intern
- 2nd Place - Website Creation Competition, Inter- deptartment Fest (3th year)
- 1st Place - Quiz Competition, Inter- deptartment Fest (3th year)
- 3th place - Memes Creation Competition, Cyber club (3th year)

PROJECTS

Secure AWS VPC & Scalable Web App Deployment

- Designed and deployed a secure, scalable AWS web application infrastructure using VPC, public/private subnets, route tables, and NAT Gateway.
- Configured EC2, Application Load Balancer, Auto Scaling, and Security Groups to achieve high availability, traffic control, and application scalability.
- Implemented EBS and EFS for persistent and shared storage, supporting reliable and scalable application infrastructure.

AWS 3-Tier Scalable Web Application

- Designed and deployed a highly available 3-tier web application on AWS with separate presentation, application, and database layers.
- Configured Amazon VPC, public and private subnets, EC2, Application Load Balancer, Auto Scaling, and Amazon RDS to achieve scalability, high availability, and fault tolerance.
- Implemented Security Groups and IAM roles to secure communication and access between application components.

AWS VPC Infrastructure & Monitoring Project

- Designed and implemented a secure AWS VPC architecture using 192.168.1.0/24 CIDR, with multiple subnets to deploy EC2 instances, Amazon RDS MySQL, Amazon EFS, and an Application Load Balancer (ALB).
- Configured 2 EC2 instances and integrated Amazon EFS to enable shared file storage and access between servers.
- Implemented Amazon CloudWatch monitoring to track CPU utilization, memory usage, and disk utilization for infrastructure performance monitoring.
- Configured route tables, Security Groups, networking, and resource connectivity to ensure security, scalability, and high availability.

Cyber Crime Response System

- Developed a Cyber Crime Response System to provide an online platform for reporting cybercrime incidents and managing complaints.
- Designed a user-friendly interface to help users submit cybercrime reports and access relevant complaint-related information.
- Implemented a digital reporting workflow to streamline complaint submission, tracking, and response management.
- Focused on improving accessibility, simplifying cybercrime reporting, and supporting efficient communication between users and the response system.
